

Modular applications for industrial automation

PlantLIVE is a suite of modular applications for industrial automation and interfacing plant floor and business systems.

The key to successful e-business and supply chain optimization is real time access to process data. **PlantLIVE** bridges the gap to enterprise systems, enabling real business benefits.

PlantLIVE leverages open technology, using OPC, ODBC and internet standards to provide a modular, distributed client-server architecture, and connectivity with a wide range of business and automation systems.

Scenic

Lightweight SCADA for real time visualization

Alarm Call

Real time alarming and notification

LiveWire OPC Servers

Real time data interfaces

- Rapid development of HMI operator interfaces

- Real time interface to business systems

- Built on open industry standards

- Flexible and scaleable modular framework

- Distributed client-server architecture

- Connectivity with a wide range of systems

- Cost effective

- Familiar 'Office' application ease of use
